

Alarm Equipment Options

We can provide a wide range of alarm equipment options to meet your individual needs. We use the world's leading alarm equipment manufacturer; Tunstall Telecom. Please contact us if you would like to enquire about having any of our range fitted to your property. (The images used in this section are copyright of Tunstall Group Ltd)

The range of equipment we can provide includes:

Lifeline 400 - A secure platform with the flexibility for you to develop and deliver new services to support independent living, Lifeline 400 combines the latest telecare technology with an effective security solution to provide users with increased security, home safety and reassurance.

Lifeline Connect - Offering the combination of the Lifeline 400's simplicity with additional advanced features that enable the unit to be personalised for individual needs and circumstances.

Lifeline Connect+ - Designed specifically to meet the needs of clients with complex and evolving health and social care monitoring requirements, Lifeline Connect+ offers a wealth of unique features, make it the most advanced home telecare platform available in the world today.

Personal Trigger (radio) - Amie & Gem - Worn round the neck, on the wrist or attached to an item of clothing, personal triggers enable a call for help to be raised anywhere in the home or garden. Both operate on the 173MHz frequency.

Personal Trigger (radio) - Amie+ & Gem+ - Enhanced to operate on the 869MHz dedicated social alarm frequency, enabling maximum reliability. [Click here to view the wearing options and easy press adaptors for the Amie+ and Gem+.](#)

Minuet Watch - This has been developed to help encourage telecare users to wear their personal triggers throughout the day. By combining an alarm button with a high quality watch, users are more likely to wear it and as a result will be provided with additional protection as their ability to raise an alarm is increased.

Smoke Detector (wireless) - Enhanced with new features such as auto low battery reporting, only one battery for ease of management and accreditation to the very latest standard for smoke detectors.

Flood Detector - Provides an early warning of flood situations, such as taps being left on.

Bed/Chair Occupancy Sensor - provides an early warning by alerting that the user has left their bed or chair and not returned within a preset time period, indicating a potential fall. The sensor can also be programmed to switch on lights, helping people find their way to and from bed easily.

Temperature Extremes Sensor - Monitors for low and high temperature extremes in addition to rate of rise of temperature. Helps minimise the risks associated with changes in temperature including the build up of heat in a kitchen and the risk of sustained periods of cold weather.

Carbon Monoxide Detector (wireless) - Warns of dangerous CO levels which otherwise could go undetected, providing unrivalled levels of accuracy and reliability.

Fall Detector - 8,000 older people fall every day in the UK. Tunstall's fall detector can provide valuable peace of mind by automatically detecting a serious fall and raising an alert to the monitoring centre or designated carer.

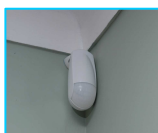

Bogus Caller Button - Fixed near the door, this button will provide reassurance in the event of an unexpected caller.

Pull Cord (radio) - To raise alerts in areas where personal triggers are unlikely to be worn e.g. positioned next to the bed. A wired version is also available.

Property Exit Sensor - As 40% of people with dementia are prone to walking about, this sensor specifically monitors for people leaving a building at unusual times of day or night. It can also detect if a main exit door has been left open and can be linked to external lighting to provide added protection.

PIR (Movement Detector) - A wireless movement detector that can be used for both activity and inactivity monitoring, for example, to check if a person has got out of bed or visited the kitchen.
